

PSC-MVP-003 Productionization Review Packet

PSC-MVP-003 Productionization Review Packet

This packet surfaces the Project Scientist MVP critical-path UX click-budget specification for Petie-facing internal review. It is a lab-test documentation artifact only. It does not approve production use, customer data, customer migration, public exposure, customer-facing readiness claims, or mutation of any client system.

Source artifact

- Spec: docs/mvp-critical-path-ux-click-budget.md
- Source review commit: 472336b9a0a4fd5e66de78b32e1d40445c103251 (docs: define MVP UX click budget)
- Source spec SHA256:
470e1c4d80d92dc2bd016ded6e20c6488b82551c4b8f6e61548d4913c2451b11
- Repo path: /Users/citadel/Projects/ProjectScientist
- Existing repo links:
 - README.md references docs/mvp-critical-path-ux-click-budget.md
 - docs/mvp-test-scope.md lists MVP-003 as the critical-path UX click-budget spec
 - docs/senaite-parity-roadmap.md references the critical-path click budget

Critical-path gate

The spec defines the daily-driver path that the MVP UI must support:

dashboard -> intake -> label -> worksheet/result entry -> review/
release -> audit/report package

Click-budget gates:

Gate	Budget
Target happy path	18 clicks or fewer

Gate	Budget
Stretch, with keyboard/defaults	12 clicks or fewer
Maximum MVP acceptance budget	24 clicks

If the synthetic MVP fixture exceeds 24 clicks from dashboard to released package, the UI fails the daily-driver test even if the API workflow works.

Stage-level click budgets

Stage	Target clicks	Maximum clicks	Required behavior
Dashboard to intake	1	2	Primary Receive sample action visible above the fold and shortcut-accessible.
Intake complete	3	5	Seeded defaults prefill; first invalid field receives focus; submit advances to label.
Label generation/print	1	2	Label generated from intake completion; print/download is primary and sample-linked.
Worksheet/result entry open	2	3	Newly accessioned lines appear in worksheet queue; active worksheet focuses first empty result.
Enter 4-analyte result set	4	6	Spreadsheet-like entry; Enter advances rows; unit/limit defaults; qualifier shortcuts.
Review/lock results	2	3	Reviewer queue opens to

Stage	Target clicks	Maximum clicks	Required behavior
Generate/ release COA	3	4	changed/ flagged rows with approve- all-valid action. Generate package, preview exceptions, release with explicit attestation.
Audit/report package verification	2	3	Package page shows audit chain/hash status and artifact download without navigation hunt.

UX coverage verified

The source review verified that the spec covers the required MVP-003 UX contract:

- Keyboard shortcuts for dashboard, intake, worksheet, review, release/package, command/search, help, save/submit, and grid navigation.
- Default focus behavior for app load, intake, pickers, validation failures, worksheet grid, review, release, and package success.
- Validation and error states for intake, label generation, result-entry save, unauthorized/protected operations, release blockers, audit/hash failures, and artifact download failure.
- Dense/no-noise UI guidance that rejects marketing chrome, oversized cards, modal wizard sprawl, kebab-menu critical actions, toast-only errors, and four-detail-page result entry.
- Stop-lines preserving local/synthetic lab-test framing only.

Validation evidence

Validation was run in an isolated clean worktree at commit 472336b9a0a4fd5e66de78b32e1d40445c103251 because the shared repo checkout currently contains unrelated uncommitted Project Scientist work from other cards.

Gate	Result	Notes
Source spec checksum	PASS	470e1c4d80d92dc2bd016ded6e20c6488b82551c4b8f6e61548d4913c2451b

Gate	Result	Notes
Phrase/ content scan	PASS	Click target/max, shortcuts, focus contract, error states, dense/no-noise rules, la only stop-line, and security doc link present.
Link/ reference scan	PASS	README, MVP test scope, and SENAITE parity roadmap reference the spec.
go test ./...	PASS	Passed in isolated clean worktree at 472336b.
go vet ./...	PASS	Passed in isolated clean worktree at 472336b.
make fmt- check	PASS	Passed in isolated clean worktree at 472336b.
make docker- smoke	PASS	Passed in isolated clean worktree after transient existing-container conflict was cleared.
make dev- down cleanup	PASS	Cleanup passed after smoke validation.

Remaining implementation caveat

This is a specification and review packet, not proof that the UI already meets the click budget. Future implementation cards must instrument the synthetic MVP fixture with stable selectors/focus checks and count the critical path against the 18-click target and 24-click maximum.

Accepted internal language

Project Scientist has a lab-test MVP critical-path UX click-budget specification for a synthetic local operator workflow. The spec defines the click gates, keyboard shortcuts, default focus contract, validation/error behavior, and dense/no-noise UI constraints needed before daily-driver testing. It is not approved for customer data, production deployment, migration, external exposure, or customer-facing readiness claims.
